Subject Index

Algorithms and real-time systems, nonlinear coherent optical processing–synthesis, 130
Applications of nonlinear processing with halftones, techniques and, 120

Bandlimiting considerations in geometrical distortion systems, 137

Ceramics, information storage and display techniques using PLZT, 44
Channel and image encoding principle, optical spatial, 112
Coherent image conversion, real-time light modulators for incoherent to, 31
Coherent optical computing elements, photodichroic materials as, 25
Coherent optical feedback systems for optical information processing, two improved, 78
Coherent optical filtering, pseudo-color encoding of pictures by means of halftone screens and, 125
Coherent optical processing–synthesis algorithms and real-time systems, nonlinear, 130
Coherent optical techniques, matrix multiplication using, 97
Color encoding of pictures by means of halftone screens and coherent optical filtering, pseudo-, 125
Combined geometrical and optical transforms for invariant processing, 91
Complex exponentiation of the input data, optical cross-correlation by, 146
Computations, TSE computers–means for massively parallel, 105
Computers–means for massively parallel computations, TSE, 105
Computing elements, photodichroic materials as coherent optical, 25
Conversion, real-time light modulators for incoherent to coherent image, 31
Cross-correlation by complex exponentiation of input data, optical, 146
Crystal light valve–image tube devices for optical data processing, hybrid liquid, 34

DKDP light valves in optical information processing, use of, 2
Data, optical cross-correlation by complex exponentiation of input, 146
Data processing, ERIM TOPR in optical, 8
Data processing, hybrid liquid crystal light valve–image tube devices for optical, 34
Display, photorefractive materials for optical storage and, 15
Display techniques using PLZT ceramics, information storage and, 44
Distortion systems, bandlimiting considerations in geometrical, 137

Encoding of pictures by means of halftone screens and coherent optical filtering, pseudo-color, 125
Encoding principle, optical spatial channel and image, 112
ERIM TOPR in optical data processing, 8
Exponentiation of input data, optical cross-correlation by complex, 146

Feedback systems for optical information processing, two improved coherent optical, 78
Filtering, pseudo-color encoding of pictures by means of halftone screens and coherent optical, 125
Frequency-variant optical signal processing, 85

Geometrical distortion systems, bandlimiting considerations in, 137
Geometrical and optical transforms for invariant processing, combined, 91

Halftone screens and coherent optical filtering, pseudo-color encoding of pictures by means of, 125
Halftones, techniques and applications of nonlinear processing with, 120
Hybrid liquid crystal light valve–image tube devices for optical data processing, 34

Image conversion, real-time light modulators for incoherent to coherent, 31

Subject Index

Algorithms and real-time systems, nonlinear coherent optical processing–synthesis, 130
Applications of nonlinear processing with halftones, techniques and, 120

Bandlimiting considerations in geometrical distortion systems, 137

Ceramics, information storage and display techniques using PLZT, 44
Channel and image encoding principle, optical spatial, 112
Coherent image conversion, real-time light modulators for incoherent to, 31
Coherent optical computing elements, photodichroic materials as, 25
Coherent optical feedback systems for optical information processing, two improved, 78
Coherent optical filtering, pseudo-color encoding of pictures by means of halftone screens and, 125
Coherent optical processing–synthesis algorithms and real-time systems, nonlinear, 130
Coherent optical techniques, matrix multiplication using, 97
Color encoding of pictures by means of halftone screens and coherent optical filtering, pseudo-, 125
Combined geometrical and optical transforms for invariant processing, 91
Complex exponentiation of the input data, optical cross-correlation by, 146
Computations, TSE computers–means for massively parallel, 105
Computers–means for massively parallel computations, TSE, 105
Computing elements, photodichroic materials as coherent optical, 25
Conversion, real-time light modulators for incoherent to coherent image, 31
Cross-correlation by complex exponentiation of input data, optical, 146
Crystal light valve–image tube devices for optical data processing, hybrid liquid, 34

DKDP light valves in optical information processing, use of, 2
Data, optical cross-correlation by complex exponentiation of input, 146
Data processing, ERIM TOPR in optical, 8
Data processing, hybrid liquid crystal light valve–image tube devices for optical, 34
Display, photorefractive materials for optical storage and, 15
Display techniques using PLZT ceramics, information storage and, 44
Distortion systems, bandlimiting considerations in geometrical, 137

Encoding of pictures by means of halftone screens and coherent optical filtering, pseudo-color, 125
Encoding principle, optical spatial channel and image, 112
ERIM TOPR in optical data processing, 8
Exponentiation of input data, optical cross-correlation by complex, 146

Feedback systems for optical information processing, two improved coherent optical, 78
Filtering, pseudo-color encoding of pictures by means of halftone screens and coherent optical, 125
Frequency-variant optical signal processing, 85

Geometrical distortion systems, bandlimiting considerations in, 137
Geometrical and optical transforms for invariant processing, combined, 91

Halftone screens and coherent optical filtering, pseudo-color encoding of pictures by means of, 125
Halftones, techniques and applications of nonlinear processing with, 120
Hybrid liquid crystal light valve–image tube devices for optical data processing, 34

Image conversion, real-time light modulators for incoherent to coherent, 31

Image encoding principle, optical spatial channel and, 112
Image tube devices for optical data processing, hybrid liquid crystal light valve—, 34
Incoherent to coherent image conversion, real-time light modulators for, 31
Information processing, two improved coherent optical feedback systems for optical, 78
Information processing, use of DKDP light valves in optical, 2
Information storage and display techniques using PLZT ceramics, 44
Input data, optical cross-correlation by complex exponentiation of the, 146
Invariant processing, combined geometrical and optical transforms for, 91
Itek PROM—a status report, 51

Light modulators for incoherent to coherent image conversion, real-time, 31
Light valve—image tube devices for optical data processing, hybrid liquid crystal, 34
Light valves in optical information processing, use of DKDP, 2
Liquid crystal light valve—image tube devices for optical data processing, hybrid, 34

Massively parallel computations, TSE computers—a means for, 105
Matrix multiplication using coherent optical techniques, 97
Modulators for incoherent to coherent image conversion, real-time light, 31
Multiplication using coherent optical techniques, matrix, 97

Nonlinear coherent optical processing—synthesis algorithms and real-time systems, 130
Nonlinear processing with halftones, techniques and applications of, 120

Optical computing elements, photodichroic materials as coherent, 25
Optical cross-correlation by complex exponentiation of input data, 146
Optical data processing, ERIM TOPR in, 8
Optical data processing, hybrid liquid crystal light valve—image tube devices for, 34
Optical feedback systems for optical information processing, two improved coherent, 78
Optical filtering, pseudo-color encoding of pictures by means of halftone screens and coherent, 125
Optical information processing, two improved coherent optical feedback systems for, 78
Optical information processing, use of DKDP light valves in, 2
Optical processing and applications, real-time, 14
Optical processing with the Ruticon, 68
Optical processing—synthesis algorithms and real-time systems, nonlinear coherent, 130
Optical signal processing, frequency-variant, 85
Optical spatial channel and image encoding principle, 112
Optical storage and display, photorefractive materials for, 15
Optical techniques, matrix multiplication using coherent, 97
Optical transforms for invariant processing, combined geometrical and, 91

PLZT ceramics, information storage and display techniques using, 44
PROM—a status report, the Itek, 51
Parallel computations, TSE computers—a means for massively, 105
Photodichroic materials as coherent optical computing elements, 25
Photorefractive materials for optical storage and display, 15
Pictures by means of halftone screens and coherent optical filtering, pseudo-color encoding of, 125
Processing and applications, real-time optical, 14
Processing, two improved coherent optical feedback systems for optical information, 78
Processing, use of DKDP light valves in optical information, 2
Processing, ERIM TOPR in optical data, 8
Processing, frequency-variant optical signal, 85
Processing, combined geometrical and optical transforms for invariant, 91
Processing with halftones, techniques and applications of nonlinear, 120
Processing, hybrid liquid crystal light valve—image tube devices for optical data, 34
Processing with the Ruticon, optical, 68
Processing—synthesis algorithms and real-time systems, nonlinear coherent optical, 130
Pseudo-color encoding of pictures by means of halftone screens and coherent optical filtering, 125

Real-time light modulators for incoherent to coherent image conversion, 31
Real-time optical processing and applications, 14
Real-time systems, nonlinear coherent optical processing—synthesis algorithms and, 130
Ruticon, optical processing with the, 68

Screens and coherent optical filtering, pseudo-color encoding of pictures by means of halftone, 125
Signal processing, frequency-variant optical, 85
Spatial channel and image encoding principle, optical, 112
Storage and display, photorefractive materials for optical, 15
Storage and display techniques using PLZT ceramics, information, 44
Synthesis algorithms and real-time systems, nonlinear coherent optical processing—, 130

TOPR in optical data processing, the ERIM, 8
TSE computers—means for massively parallel computations, 105
Techniques and applications of nonlinear processing with halftones, 120
Transforms for invariant processing, combined geometrical and optical, 91
Tube devices for optical data processing, hybrid liquid crystal light valve—image, 34
Two improved coherent optical feedback systems for optical information processing, 78

Use of DKDP light valves in optical information processing, 2

Valve—image tube devices for optical data processing, hybrid liquid crystal light, 34
Valves in optical information processing, use of DKDP light, 2
